

HASEEB UR REHMAN

AI-Augmented Full-Stack Software Engineer | Node.js · NestJS · Next.js · TypeScript · PostgreSQL · AWS · OpenAI · Claude AI
| Open to Remote Worldwide

Builds faster, ships smarter — leveraging AI tools (Claude, ChatGPT, GitHub Copilot) to accelerate development, automate workflows, generate boilerplate, debug complex systems, and deliver production-grade software at 2× speed.

PROFESSIONAL SUMMARY

AI-Augmented Full-Stack Software Engineer with 4+ years delivering scalable web applications, ERP systems, and AI-powered platforms for US and international clients. Integrates Claude AI, ChatGPT, and GitHub Copilot into daily development workflows to ship features faster, automate repetitive tasks, and solve complex engineering problems with greater precision. Expert in Node.js, NestJS, Next.js, TypeScript, and PostgreSQL. Strong experience with microservices, REST API design, RBAC security, OpenAI API integrations, AWS deployments, and asynchronous job processing. Proven remote collaborator seeking worldwide opportunities.

TECHNICAL SKILLS

Backend	Node.js, NestJS, Express.js, REST APIs, BullMQ, Microservices, WebSockets
Frontend	Next.js, React.js, TypeScript, Redux Toolkit, Material UI, Tailwind CSS
Database	PostgreSQL, MongoDB, TypeORM, Mongoose, Database Migrations
Cloud & DevOps	AWS (S3, EC2, ECS, Lambda, ECR), Docker, Vercel, Kubernetes, Railway, GitHub Actions CI/CD
Auth & Security	JWT, RBAC, OAuth 2.0, AWS Cognito, Casbin, Casl
Integrations	Shopify Webhooks, Stripe, OpenAI API, Gemini, Twilio, SendGrid, Trigger.dev, ShipStation, Booking.com, Airbnb API
AI & LLMs	Claude AI, ChatGPT, GitHub Copilot, OpenAI API, Gemini, Prompt Engineering, AI-assisted Development, LLM Integration
Tools	Git, GitHub, GitLab, Bitbucket, Jenkins, Jira, Agile/Scrum, Postman, API Documentation

WORK EXPERIENCE

Software Engineer — Optima Geeks, Lahore, Pakistan

January 2025 – Present

Cuddle Clones — Shopify E-commerce Order Management (US Client)

Problem: No internal system to process and track high-volume custom pet product orders — all done manually.

- Built full-stack order platform syncing 500+ daily Shopify orders via webhooks, reducing manual effort by ~60%
- Designed BullMQ async job queue for multi-category order workflows, improving throughput by ~35%
- Developed NestJS + Next.js admin dashboard with Casbin RBAC for order, product, SKU, and user management
- Integrated Twilio SMS + email notifications at 5 order lifecycle stages; connected ShipStation for automated fulfillment
- Deployed on AWS (EC2, ECS, S3) + Docker + Vercel with GitHub Actions CI/CD

Stack: NestJS · Next.js · TypeScript · PostgreSQL · TypeORM · BullMQ · Casbin · JWT · AWS S3/EC2/ECS · Docker · Vercel · GitHub Actions · Shopify Webhooks · ShipStation · Twilio · SendGrid

YapIt Marketing Hub (Alvo Marketing) — AI Marketing Campaign Platform NEW

Problem: Small merchants lack the time and expertise to plan, create, and launch effective ad campaigns.

- Built a Next.js 16 platform (live at alvo.marketing) that turns any business link into a complete ad campaign — auto-generating copy, creative, and audience targeting across 100+ marketing channels in ~3 minutes
- Generated content via LLMs (DigitalOcean Inference for text, Gemini for image generation); scraped business data with Jina Reader and ran an async Trigger.dev v4 background pipeline with a multilingual (i18n) site
- Launches posts and ads via the YapIt Ads API; media stored and served from DigitalOcean Spaces (S3-compatible CDN)

Stack: Next.js 16 · TypeScript · Prisma · PostgreSQL · Trigger.dev v4 · Gemini · DigitalOcean Inference · shadcn/ui · Tailwind CSS · Framer Motion · DigitalOcean Spaces · Docker

GID (Get it Done) — Kafka-Driven Microservices Platform NEW

Problem: A field-service marketplace needed a scalable, event-driven backbone spanning multiple admin, partner, and customer applications.

- Contributed to a microservices platform with NestJS + Flask services (order intake, payments, documents, email, jobs) communicating over a Kafka message bus
- Worked across Vue.js admin/partner/customer/brand apps deployed on Kubernetes (k3s) with Helm charts and Tilt for local development

- Backed by PostgreSQL/TypeORM and Redis caching behind a GraphQL gateway

Stack: NestJS · Flask · Kafka · Kubernetes (k3s) · Helm · Tilt · Vue.js · PostgreSQL · TypeORM · Redis · GraphQL · Docker

Software Engineer — SolutionsLoft, Delaware, USA (Remote)

March 2023 – January 2025

Control Net App — AI Content & 3D Generation Platform

Problem: Client needed a unified platform for AI-generated text, chat, and 3D outputs with gamified user engagement.

- Integrated OpenAI API for text-to-text, text-to-chat, and text-to-3D generation with avatar customization features
- Built CMS for content and DropCoin rewards; implemented Swipe-to-Earn feature boosting daily active engagement

Stack: NestJS · Next.js · TypeScript · PostgreSQL · OpenAI API · AWS S3/EC2 · Docker · Cloudinary · Vercel

Fantasy Showdown — Blockchain Fantasy Football Platform

Problem: No platform bridging Yahoo/ESPN fantasy teams with Web3 wallet-based digital assets and tournaments.

- Built MERN + Ethereum platform with Yahoo/ESPN team imports, MetaMask wallet integration, and smart contract prize distribution
- Developed high-concurrency REST APIs for game state, rosters, and real-time scoring for 1,000+ users

Stack: Node.js · React.js · MongoDB · Web3.js · Ethereum Smart Contracts · JWT · AWS EC2 · Docker · GitHub CI/CD

AQR Link — Multi-Channel Property Management System

Problem: Property managers manually updated availability across Booking.com, Airbnb, and Vrbo, causing double bookings.

- Built real-time XML-to-JSON OTA sync pipeline across Booking.com, Airbnb, and Vrbo via Rental United API, eliminating double bookings
- Designed microservices architecture with JWT + RBAC authentication for high availability and multi-role access

Stack: NestJS · PostgreSQL · TypeORM · JWT · RBAC · XML-to-JSON Pipeline · Booking.com · Airbnb · Vrbo via Rental United PMS

EventZero — Carbon Emission Calculation Platform

Problem: Organizations had no digital tool to calculate and report carbon footprints from their events.

- Built React.js + Node.js platform with automated carbon calculation using emission factor models
- Integrated Stripe subscription payments and AWS Cognito authentication for secure multi-tier access

Stack: Node.js · React.js · TypeScript · PostgreSQL · Stripe · AWS Cognito · AWS Lambda · S3 · EC2

Aramco CMS — Training Content Management System

Problem: Training materials were distributed manually, causing outdated content to reach employees.

- Built centralized CMS with REST API sync to Aramco mobile app, ensuring up-to-date training content organization-wide
- Implemented RBAC controls separating editor, reviewer, and admin access to prevent unauthorized changes

Stack: NestJS · React.js · TypeScript · PostgreSQL · TypeORM · JWT · RBAC · REST API integration with iOS/Android mobile application

Metavivor Survey App — Breast Cancer Patient Data Platform

Problem: Needed a secure, accessible tool for structured medical survey data collection from cancer patients.

- Built multi-step conditional survey with React.js Context API and secure REST APIs with RBAC for researcher-only data access
- Added input validation and data sanitization across all endpoints for data integrity and privacy compliance

Stack: NestJS · React.js · TypeScript · PostgreSQL · JWT · RBAC · Input validation · Data sanitization

Associate Software Engineer — Axiom World Pvt Ltd, Lahore, Pakistan

September 2021 – February 2023

SSLC ERP — 14-Branch Supermarket Chain (Saudi Arabia)

Problem: No unified system across 14 branches — sales, inventory, and financials managed in silos causing stock discrepancies.

- Built full ERP covering Sales, POS, Inventory, Warehouse, Purchase Orders, and Financials across 14 branches
- Delivered React.js e-commerce website with real-time ERP inventory sync to prevent overselling

Stack: Node.js · React.js · PostgreSQL · REST APIs · Material UI · Sales · POS · Inventory · Warehouse · Financials · Purchase Orders

Bodla Builders — Construction ERP (Multi-Office)

Problem: Construction company managed projects, vendors, and budgets via spreadsheets across multiple offices.

- Built construction ERP with Project Management, Task Tracking, Inventory, Vendor Management, and Financials across all offices with role-based dashboards

Stack: Node.js · React.js · PostgreSQL · JWT · RBAC · Material UI · Projects · Tasks · Sales · Inventory · Vendor Management · Financials

Al Jalil — Real Estate ERP & Investor Portal

Problem: No digital portal for investors to browse properties — data shared via email, slowing the sales cycle.

- Built React.js investor portal integrated with ERP via REST APIs, giving real-time access to properties, packages, and portfolios
- Implemented RBAC separating investor, sales team, and admin views within the ERP system

Stack: Node.js · React.js · PostgreSQL · JWT · RBAC · Tailwind CSS · Property Management · Investor Portal · Sales Pipeline · Payment Schedules

EDUCATION

Bachelor of Computer Science (BSc CS)

University of Engineering and Technology (UET), Lahore, Pakistan

Sep 2017 – Aug 2021

LANGUAGES

Urdu — Native | English — Professional Proficiency (B2 Written · C1 Spoken)
